Add WeChat edu\_assist\_pro

# Main drivers for video traffic growth

- Video is part of most online content (news, ads, social media, etc.)
- Video sharing services
- Video streaming services
- Changing user behaviour
  - video being consumed
- Increased segment penetration
  - Add WeChat edu\_assist\_pro
- Evolving devices with larger screens
  - higher resolutions
- Increased network performance through evolved 4G deployments
- Emerging immersive media formats and applications (HD/UHD, 360-degree video, AR, VR)

Assignment Project Exam Help

Why is it <https://eduassistpro.github.io/>?

Add WeChat edu\_assist\_pro

# 3 Application types

- *streaming, stored* audio, video
  - *streaming*: can begin playout before downloading entire file
  - *stored (at server)*: can transmit faster than audio/video will be rend ring at client)
    - e.g., YouTube <https://eduassistpro.github.io/>
- *conversational* voice/video over Add WeChat edu\_assist\_pro
  - interactive nature of human-to-human conversation limits delay tolerance
  - e.g., Skype
- *streaming live* audio, video
  - e.g., live sporting event (futbol)

# What is streaming?

Everyone has different perspective

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

# Video streaming: Challenges

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

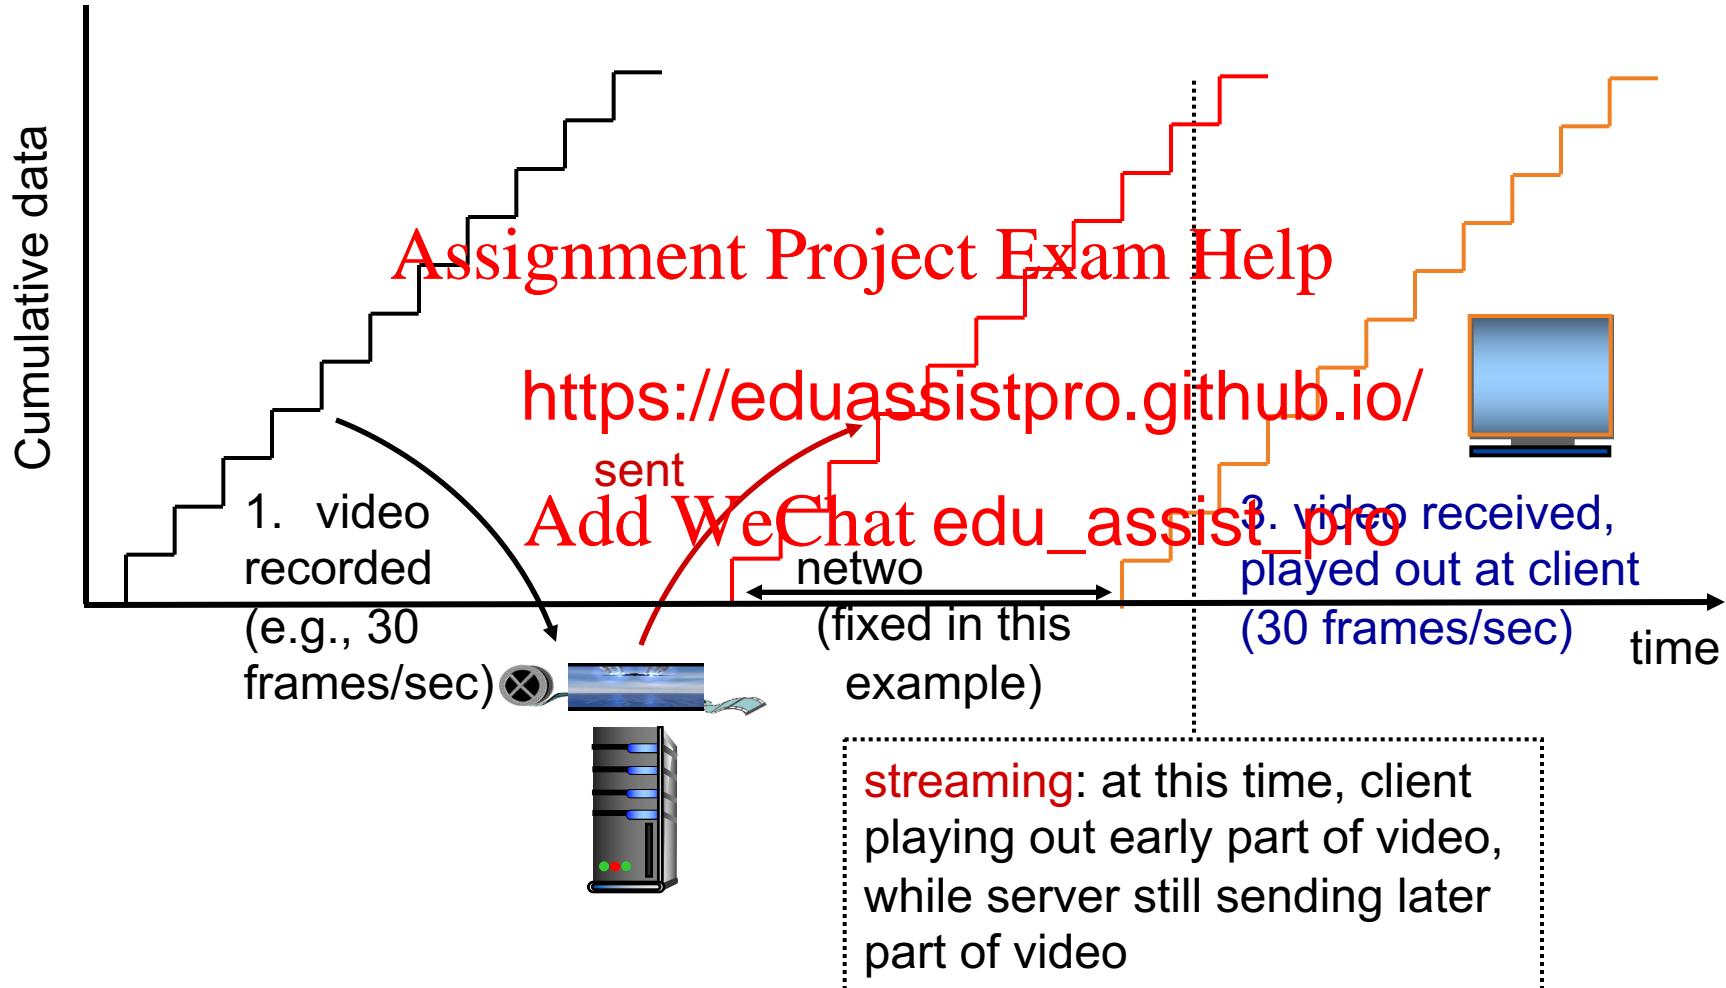

# Video Streaming: challenges

- video traffic: major consumer of Internet bandwidth
  - Netflix, YouTube: 37%, 16% of downstream residential ISP traffic
  - ~1B YouTube users, ~75M Netflix users
- challenge: scale - how to reach ~1B users?
- challenge: heter <https://eduassistpro.github.io/>
- solution: distributed, application-level infrastructure

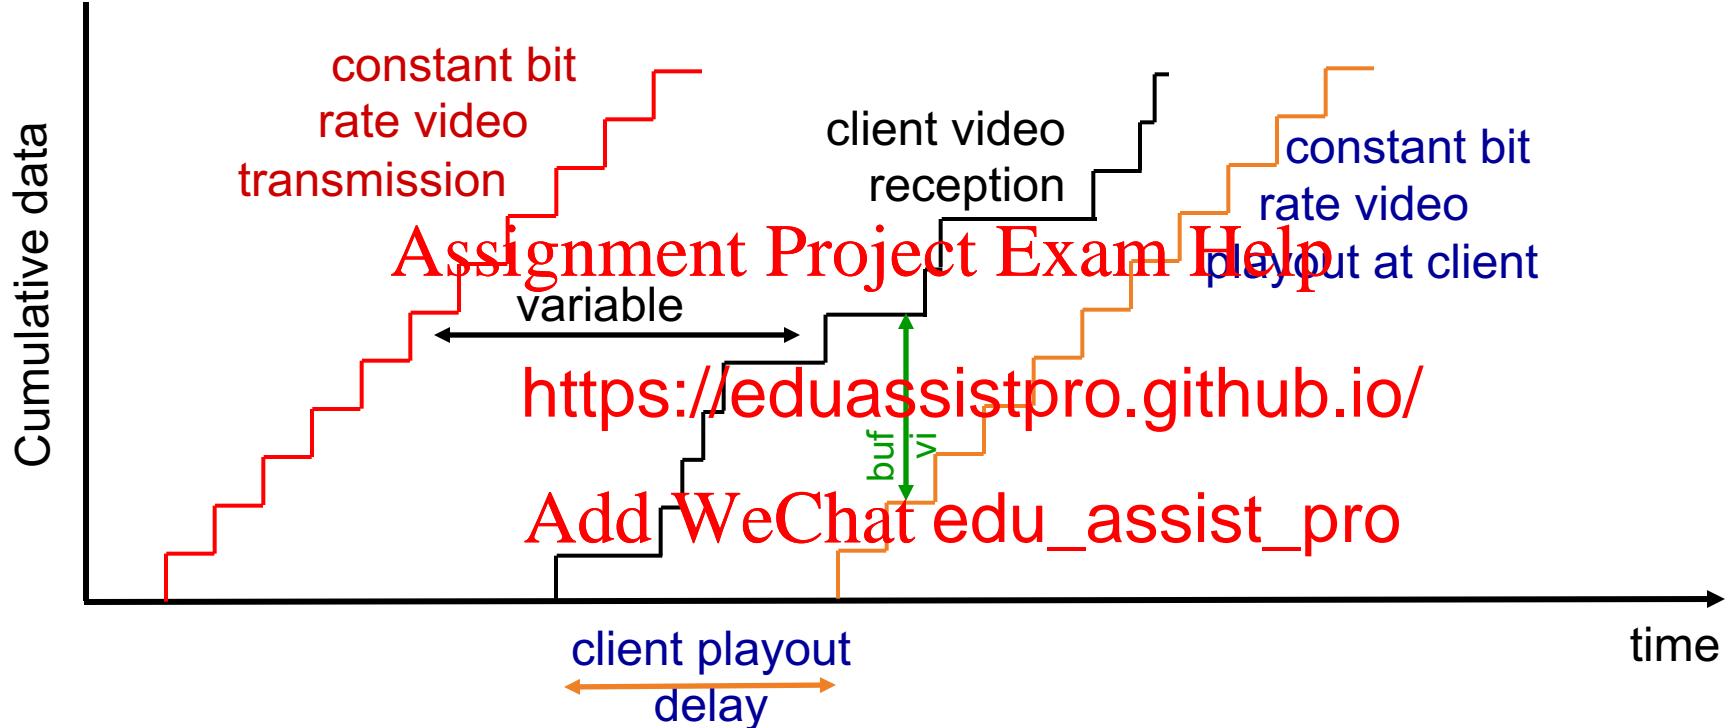

## Streaming stored video:

# Streaming stored video: challenges

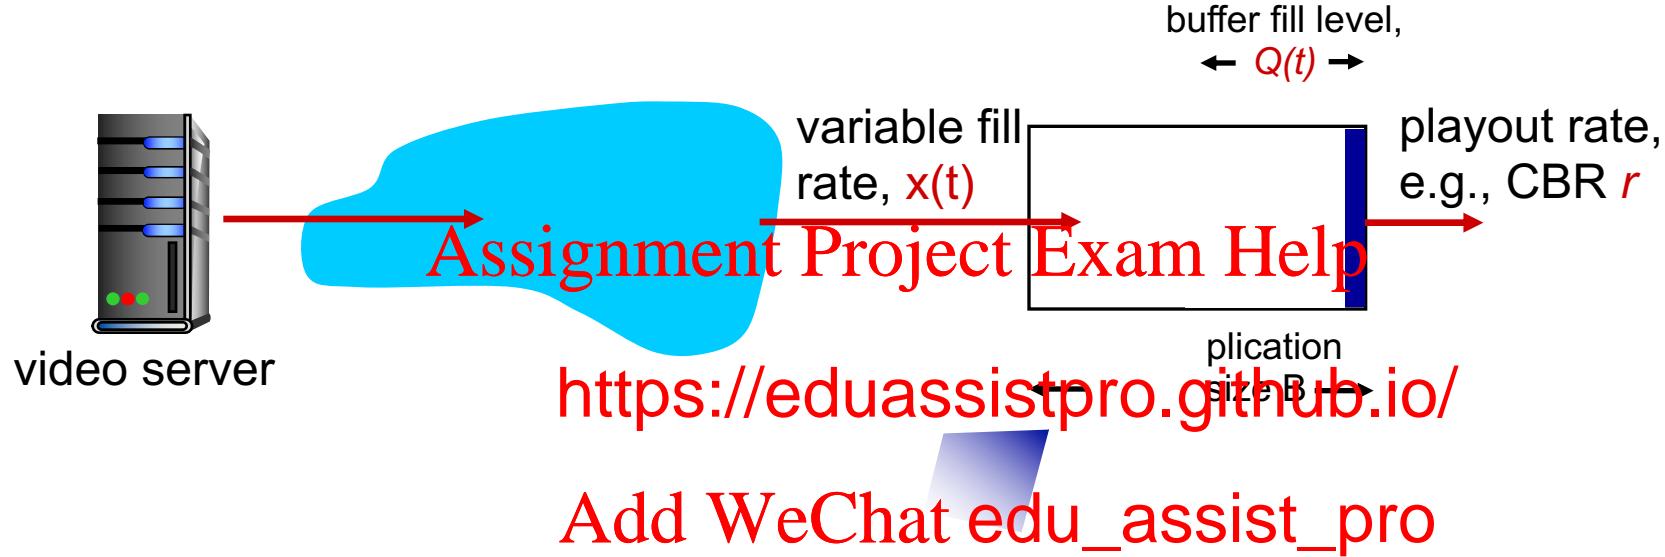

- **continuous playout constraint:** once client playout begins, playback must match original timing
  - ... but ~~Assignment Project Example Help~~ (~~https://eduassistpro.github.io/~~), so will need client playout requirements
- other challenges:  
<https://eduassistpro.github.io/>
  - client interactivity: pause, fast-forward, rewind, jump through video
  - video packets may be lost, retransmitted

## Streaming stored video: revisited

- *client-side buffering and playout delay*: compensate for network-added delay, delay jitter

# Client-side buffering, playout

1. Initial fill of buffer until playout begins at  $t_p$
2. playout begins at  $t_p$ ,
3. buffer fill level varies over time as fill rate  $x(t)$  varies and playout rate  $r$  is constant

# **DASH: Dynamic, Adaptive Streaming over HTTP**

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

# Streaming multimedia: DASH

- *DASH: Dynamic, Adaptive Streaming over HTTP*
- *server:*
  - divides video file into multiple chunks
  - each chunk stored, encoded at different rates
  - *manifest file* <https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

# **Streaming multimedia: DASH – Manifest file**

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

# Streaming multimedia: DASH

- *client:*
  - periodically measures server-to-client bandwidth
  - consulting manifest, requests one chunk at a time
    - chooses maximum coding rate sustainable given current bandwidth
    - can choose different points in time (depending on available bandwidth at time)

# Streaming multimedia: DASH

- “intelligence” at client: client determines
  - **when** to request chunk (so that buffer starvation, or overflow does not occur)
  - **what encoding** to request (higher quality when more bandwidth)
  - **where** to request from URL server that is “close” to client or has available bandwidth)

This is why we (mobile developers) need to understand video streaming

**It is not just stored video...**

**Assignment Project Exam Help**

**<https://eduassistpro.github.io/>**

**Add WeChat edu\_assist\_pro**

# Content distribution networks

- *challenge*: how to stream content (selected from millions of videos) to hundreds of thousands of *simultaneous* users?
- *option 1*: single large “mega-server”
  - single point
  - point of net
  - long path to distant clients
  - multiple copies of video sent over outgoing link

....quite simply: this solution *doesn't scale*

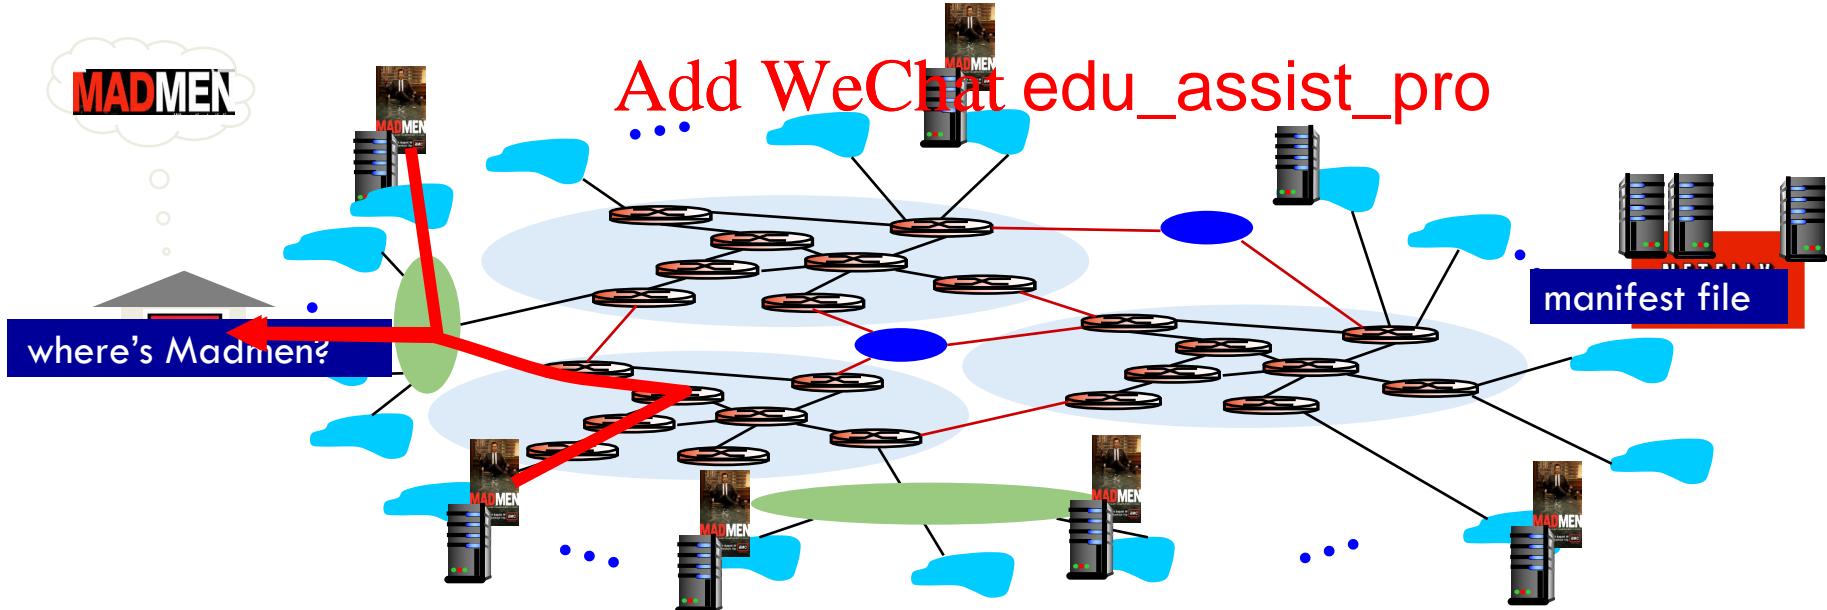

# Content distribution networks

- *challenge:* how to stream content (selected from millions of videos) to hundreds of thousands of simultaneous users?
- *option 2:* store/serve multiple copies of videos at multiple geographically
  - *enter deep:* pu <https://eduassistpro.github.io/> access networks
    - close to users
    - used by Akamai, 1700 locati
  - *bring home:* smaller number (10's) of larger clusters in POPs near (but not within) access networks
    - used by Limelight

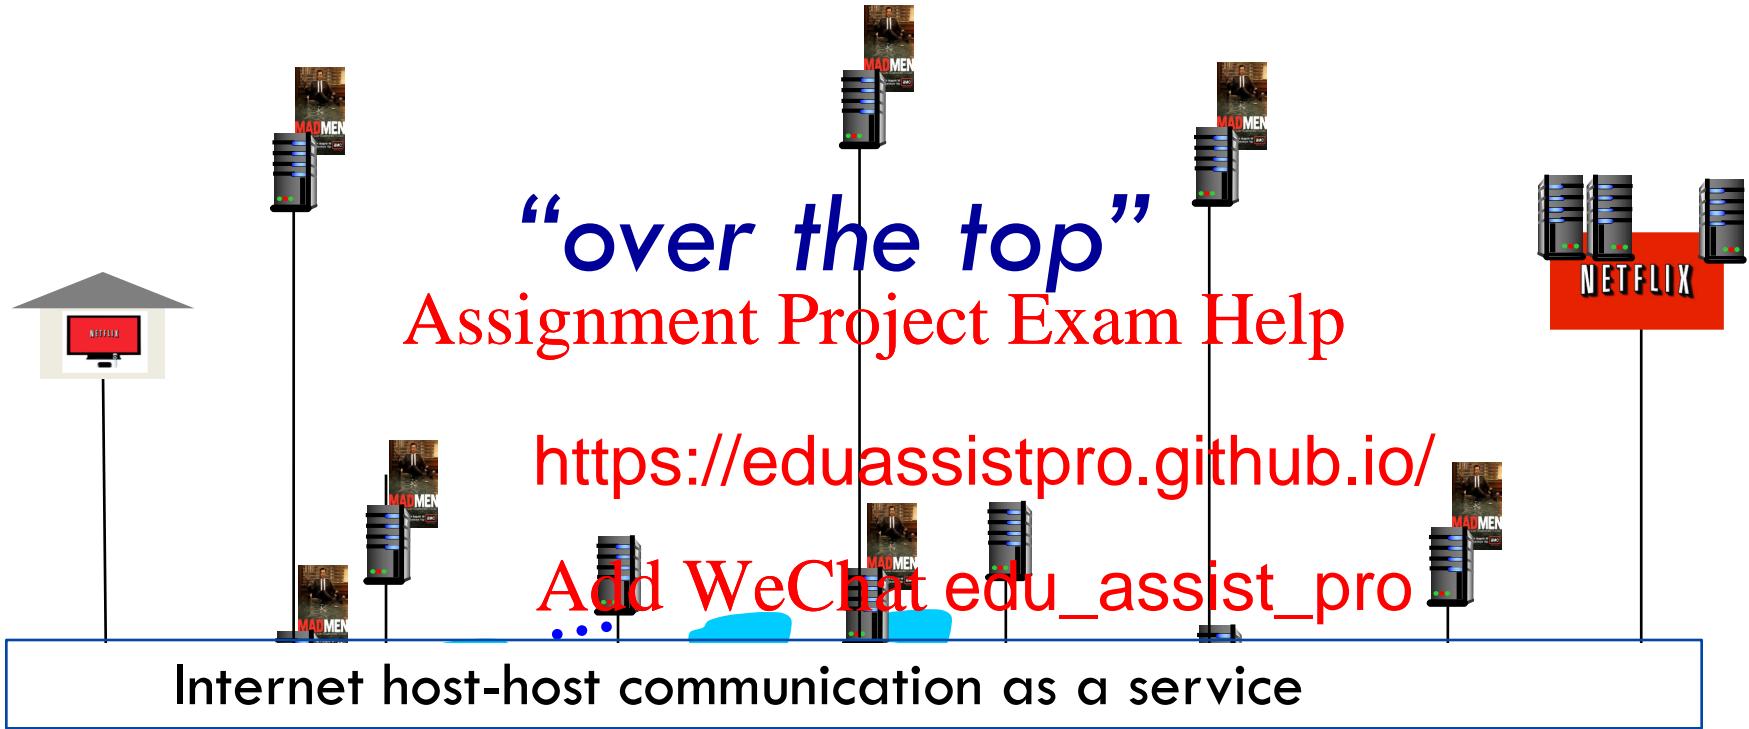

# Content Distribution Networks (CDNs)

- CDN: stores copies of content at CDN nodes
  - e.g. Netflix stores copies of MadMen
- subscriber requests content from CDN
  - directed to nearest copy, retrieves content
  - may choose path congested

<https://eduassistpro.github.io/>

# Content Distribution Networks (CDNs)

**OTT challenges:** coping with a congested Internet

- from which CDN node to retrieve content?
- viewer behavior in presence of congestion?
- what content to place in which CDN node?

## **Part 3: Next generation interactive media delivery**

Week 10 - COMP5216

Add WeChat edu\_assist\_pro

# VR/360° videos

- VR/AR/360 video traffic will increase by **12-fold** of the value in 2017, by 2020 Bullet point
- Immersive video experience from **360° vide** <https://eduassistpro.github.io/>
- Many applications
  - Entertainment
  - Education
  - Telemedicine

## **Sample 360° video**

**Assignment Project Exam Help**

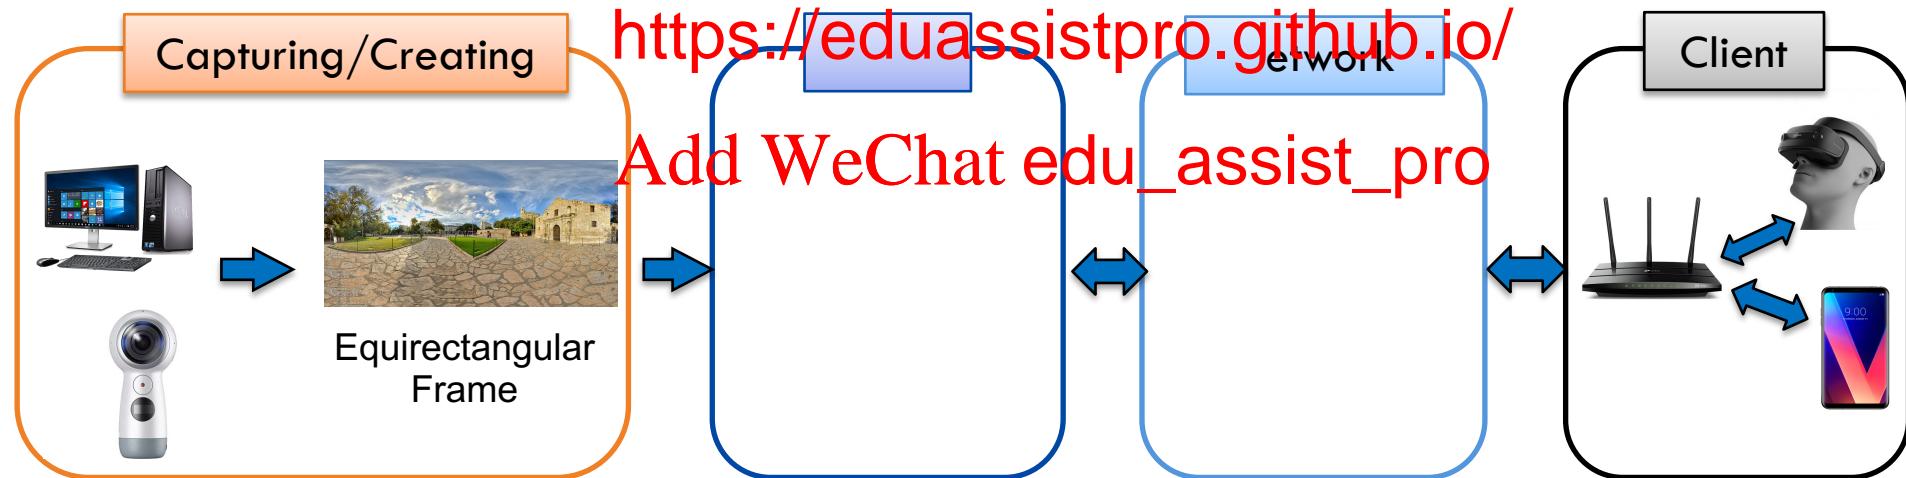

**<https://eduassistpro.github.io/>**

**Add WeChat edu\_assist\_pro**

# How current 360° video streaming works?

- YouTube, Facebook, Vimeo, Netflix ... currently host 360 videos.
- General architecture of 360° video streaming used by majority of the services

Assignment Project Exam Help

# Challenges: High bandwidth consumption

- 360 video frames are 4-6 times larger than normal frame.
- Redundant data transmission
  - Only selected portion of the video is visible at a given time
- High bandwidth <https://eduassistpro.github.io/>

↓ x4 – 6

360

- For 4K resolution smooth playback\*
  - On-demand BW: 100 Mbit/s
  - Live-telecasting BW: 83.2 Mbit/s
  - Typical 4G LTE BW: 20 Mbit/s

\* Whitepaper on the VR-Oriented Bearer Network

# Challenges: Delay

## Delay results in Stalling/Rebuffering

For ~50% of 360 video sessions in YouTube & Facebook can stall at least 5s per minute in total<sup>[1]</sup>.

Assignment Project Exam Help

Excess delay caus <https://eduassistpro.github.io/ness>

Different symptoms<sup>[2]</sup>: general discomfort, headache, nausea, vomiting etc ...

  - APK file
- **Submission 2 will be used for marking**

# Project Final Submission

## – Presentation & Demo

- Week 11 – Lecture period will be three hours long (no tutorials)
- Starts at 5:00pm.
- We have 30 groups
- 3 minutes to pre
- You can share your presentation with the emulator or you can use a camera and a mobile phone.
- 2 minutes demo and Q&A.
- It is your responsibility to arrange all technical requirements to successfully demonstrate the key features.

# Presentation Schedule – Week 11

Time	Group	App name
5:06-5:11	1	Uni-CODEX
5:12-5:17	2	Food-Fair
5:18-5:23	3	Chef Group
5:24-5:29	4	Exposure
5:30-5:35	5	Focus On
5:36-5:41	6	Study help app
5:42-5:47	7	Easy to Buy
5:48-5:53	8	Study Hobbies
5:54-5:59	9	Tic-Tac
6:00-6:05	10	Game Forum
6:06-6:11		
6:12-6:17		
6:18-6:23		
6:24-6:29	14	Lose Weight Helper
6:30-6:35	15	Health
6:36-6:41	16	GPS
6:42-6:47	17	Trave
6:48-6:53	18	PetsH
6:54-6:59	19	Livery
7:00-7:05	20	Orphan donations
7:06-7:11	21	Pet Recipie
7:12-7:17	22	Wardrobe
7:18-7:23	23	Clinical Tasks
7:24-7:29	24	Anonymous social app
7:30-7:35	25	Wage Theft
7:36-7:41	27	Room mate
7:42-7:47	28	Pet Boss
7:48-7:53	30	Makeup Booking
7:54-7:59	33	Team Mates
8:00-8:05	35	Image search

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat `edu_assist_pro`

# **Submissions - Final Report [ 7 marks]**

- 1) Introduction to the app: succinctly describe the problem and the app.
- 2) Validation of the app: for each item in the minimum feature set, provide an experimental validation that you have managed to successfully implement the proposed techniques. For examples,
  - a. Results of a user study to reflect the effectiveness of the GUI.
  - b. Experimental techniques (and <https://eduassistpro.github.io/> the optimization mechanisms).
- 3) Challenges and setbacks: explain goals proposed at the proposal phase different paths.
- 4) Next steps: identify what is missing from your current implementation and explain how to plan to take your app to the next level.
- 5) References
- 6) Appendix: documentation and manual.

# Submissions

## 6) Appendix: documentation and manual.

You also need to write a documentation/manual as an Appendix to the final report to guide a potential user on how to set up the working environment and re-compile and re-deploy your app at <https://eduassistpro.github.io/>

The final report must be of Adobe  
Format (\*.pdf) format. No other file format is accepted. The final report must **NOT** exceed **TWELVE** pages including references (single space and font size 12 for body text).

Add WeChat edu\_assist\_pro

able Document

Page 56

# Submissions

- **Video [3 marks]**

The introduction video must be compatible with the VLC media player and .mp4 file format is preferred. The video should not be longer than 3 minutes.

- **Presentation [2 marks]**

The project presentation is to pitch your app. Each group has maximally **3 minutes** to present the assignment using the presentation material submitted. The presentation will be generally starting at the lecture time (i.e. 5:00pm) from Group 1 in the weekly lecture room. You should be familiar with the presentation material submitted. The presentation will be evaluated in terms of clarity, attitude/confidence, presentation style and content. <https://eduassistpro.github.io/>

- **Demo [3 marks]**

Each group has maximally **2 minutes** after the presentation to demonstrate the key features of the app. The app should be installed on a mobile device. The demonstration will be evaluated based on the successful demonstration of the key features of the app, and the readiness to distribute will be evaluated.

It is your responsibility to arrange all technical requirements to successfully demonstrate the key features, e.g. internet access, multiple mobile devices in case of a collaborative app, other supporting devices such as wearables, access to cloud services, etc. prior to the presentation time slot.

# Submissions

- **Source code of the app [5 marks]**

Export of the project development environment as a zip file and an **APK file** (or suitable method/format) to install the developed app on a mobile device. Successful installation of the app at <https://eduassistpro.github.io/> and evaluation of key features of the app, challenges and effort in creating it will be evaluated.

Add WeChat edu\_assist\_pro

# Individual Contributions

- “Each group member must contribute to the assignment equally and the members will be awarded the same marks. Under certain circumstances, adjustment of marks may happen to group members at the discretion of the course coordinator.”
- App development is always going to be group work.
- In real-life, every friends
  - Thus, navigating
  - Resolve the problems now. Talk to me.
- Due to multiple requests, I have decided to give you the option to submit a peer-feedback form. (Optional)
  - Individual submission. (No marks allocated)
  - However, if you receive entirely negative feedback from all members, it may lead to reduction in marks.

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

# Project Final Marking

- **Mark Allocation**
  - The app [10 marks]
  - Novelty of the problem, creativity of the solution, challenges in developing the solution and the amount of effort in developing the solution will be evaluated by a panel of judges. All deliverables will be considered in this evaluation including the in-class presentation and demo.
  - Source code [5 marks]
  - Final report [7 m]
  - Video [3 marks] <https://eduassistpro.github.io/>
  - Presentation [2 marks]
  - Demo [3 marks] Add WeChat edu\_assist\_pro
- Panel of judges includes two external evaluators;
  - Suranga Seneviratne from USYD
  - Glenn Stephens from Microsoft
- **Good Luck !**
